Tokenizing Gold Mining Contracts

- Small and artisanal gold mines issue contracts to Aurumchain.
- We tokenize those contracts and offer them to investors on our platform.
- Investors fund mining operations and receive a share of the output in return.

AURUMCHAIN
OWN YOUR OWN GOLD MINE

Targeting often-neglected small scale Gold mines.

Problem

- Large mining corporations avoid low-yield deposits — too small to justify industrial operations.
- Yet these same deposits can be profitable for small mines and retail investors.

Our Approach

- We use crowdfunding to pool global capital for these projects.
- Our platform turns overlooked opportunities into real, profitable investments.

HOW IT ALL WORKS

- Mining Agreement: The mine signs a contract with Aurumchain, outlining gold output terms.
- Tokenization: We issue investment tokens linked to that contract.
- Funding: Investors purchase tokens and fund the operation.
- Payout: Investors are paid in Golden Fleece Tokens — pegged to real gold.

Turning Real Gold into a Real Investment Opportunity

- Aurumchain gives investors access to gold mining projects — without needing to operate a mine.
- We're launching with 3–5 mining partners and aiming to open our platform to early supporters.
- AurumChain is currently raising capital to complete development, finalize contracts, and set the project in motion.
